

**National Evaluation of New Deal for Communities
Household Survey 2006**

**PRELIMINARY KEY INDICATORS:
Sheffield
Burngreave New Deal for Communities
24 November 2006**

Technical Note

This document presents a set of summary key indicators for the 2006 NDC Household Survey Data. Full data for *all* questions can be found in the Topline, Computer Tables and SPSS dataset.

Results are based on 414 interviews conducted face-to-face in-home among residents aged 16+ in Sheffield between 13th May - 7th October 2006.

2002 and 2004 results are based on 502 and 503 interviews respectively. Aggregate data are based on 19,574 (2006), 19,633 (2004), and 15,792 (2006) interviews.

Bases are as above unless specified after the question text. Please remember to check base definitions carefully - this will show which respondents have answered a question.

Partnership data are shown in the first three columns (2002, 2004, 2006), overall figures for NDC areas as a whole are shown in the 'NDC Aggregate' columns, and national benchmarks (eg. England as a whole) are shown in the 'National' column. Where national benchmarks are not available cells are shaded.

The sources for national comparisons are shown as footnotes, but please note that many of these comparisons should be viewed as indicative, given slight differences in how questions are asked, differences in timing and fieldwork approaches of surveys etc.

Statistical Reliability

Please be particularly careful when looking at how the results in your area have changed, and how these compare with the NDC aggregate and national benchmarks. Where all respondents have answered a question you should be looking for differences of 8 percentage points or more between your 2002, 2004 and/or 2006 figures to be sure they represent actual changes and are not due to chance. Similarly you should be looking for differences of around 6 or 7 percentage points between your area and the NDC aggregate or national figures to be sure they represent actual differences.

Interpreting the data

An asterisk (*) indicates a percentage of less than 0.5% but greater than zero. N/A indicates that data is not available or not applicable. Where percentages do not add up to 100 this may be due to computer rounding or multiple responses.

Weighting

Data are weighted to reflect the number of adults aged 16+ in each household and by gender and age profiles for each area based on updated Census data supplied by SDRC at Oxford University. Where data are based on household information they are weighted only to correct for multiple dwellings or households at addresses.

Further information for Partnerships

All data sources (toplines, key indicators, computer tables and SPSS files for each survey wave) are available on the Ipsos-MORI NDC Extranet site (www.ipsos-mori.com/ndc). The Extranet also includes briefing material on reading topline and tables from the 2004/5 MORI NDC Partnership Training sessions.

For further information on these results, your individual partnership login information, or information on the household survey generally, please do not hesitate to call Hayley Muller at Ipsos MORI on 020 7347 3252, or your usual Ipsos MORI contact on 0207 347 3000.

NEW DEAL FOR COMMUNITIES HOUSEHOLD SURVEY 2006

HOUSING AND AREA

	Sheffield			Aggregate			National
	2002 %	2004 %	2006 %	2002 %	2004 %	2006 %	%
Very/fairly satisfied with accommodation ¹ (HO3)	85	83	85	81	82	82	91
Resident at address less than 3 years ² (HO6)	30	24	22	32	28	27	25

¹⁴ British Crime Survey 2004/05

¹⁵ British Crime Survey 2004/05

¹⁶ British Crime Survey 2004/05

¹⁷ British Crime Survey 2004/05

NB: Please note that all comparisons on experience of crime can only be indicative as BCS gathers information through a much more detailed set of questions. As a result, the national figures quoted for CR4 A and D differ from published BCS estimates of victimisation which relate to broader categories of crime (and can be obtained from 'Crime in England and Wales 2004/5'). This year, for the first time in the study, we have been able to source data from BCS that is most comparable to the NDC Household Survey question. These therefore provide a more precise comparison when looking at current crime levels in NDC areas compared with the country as a whole. However, given the change in data definitions, please refer to the benchmark trends document for more information on using consistent national benchmark trends on crime.

WORK AND INCOME - ALL RESPONDENTS

	Sheffield			Aggregate			National
	2002 %	2004 %	2006 %	2002 %	2004 %	2006 %	%
In paid work (including gov't scheme/Modern Apprenticeship) ¹⁸ (WO1)	39	40	45	43	44	45	60
